

Reports

The report addons offers an easy way to generate reports based on Soffid data model.

In order to manage reports, three authorization levels are allowed:

- Permission to access report screen. Allows the user to executed the explicitly granted reports
- Permission to schedule reports. Allows the user to schedule the execution and delivery of periodic reports.
- Permission to admin reports. Allows the user to upload or remove reports.

To define a new report, you must:

1. Install report addon
2. Restart console
3. Log off and log in again.
4. Open report addon screen.
5. Download ireport classes from Soffid.
6. Open it and customize hiberante.cfg.xml to point to your development database.
7. Download ireport designer from [sourceforge](#).
8. Execute ireport
9. Add ireport addon jar, previously downloaded on step 5
10. Design your report, using the hibernate connector. The data model documentation, including E-R diagrams is [here](#)
11. Upload your report to Soffid
12. Execute or schedule it !!!
