

Active Directory back channel configuration

In order to configure Active Directory back channel, you must use the eris command line tool.

Being at IAM-Sync installation directory change to eris or eris64 directory and execute:

```
eris-ad-service CONFIGURE url agent | more
```

where url is the master syncserver url (<http://master.dom.dom:port>)

and agent is the agent code name configured on soffid console.

(To see more information when configure use |more).

In order to test configuration you must use the eris command line tool.

Being at IAM-SYNc installation directory change to eris or eris64 directory and execute:

```
eris-ad-service TEST user pass | more
```

where user and pass can be dummy. If you use a real one it will be propagated to the system.

(To see more information during test use |more).
